Before you invest, you may want to review the Fund's complete prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund online at <https://apertureinvestors.com/fund/aperture-endeavour-equity-fund-atomx/>. You can also get this information at no cost by calling 1-888-514-7557, by sending an e-mail request to ApertureFunds@apertureinvestors.com, or by asking any financial intermediary that offers shares of the Fund. The Fund's prospectus and statement of additional information, both dated May 1, 2023, as they may be amended from time to time, are incorporated by reference into this summary prospectus and may be obtained, free of charge, at the website, phone number or e-mail address noted above.

Investment Objective

The Aperture Endeavour Equity Fund (the “Endeavour Equity Fund” or the “Fund”) seeks a return in excess of the MSCI ACWI hedged to USD Net Total Return Index (the “MSCI USD Index”).

Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. The Fund does not charge any fees paid directly from your investment (including those commonly described as Load or Sales Charges). You may, however, be required to pay commissions and/or other forms of compensation to a broker for transactions in shares of the Fund, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

	Institutional Shares	Class X Shares
Management Fees ¹	0.33%	0.33%
Other Expenses	<u>0.26%</u>	<u>0.35%</u>
Shareholder Servicing Fees	None	0.10%
Other Operating Expenses	0.26%	0.25%
Total Annual Fund Operating Expenses	0.59%	0.68%

¹ The management fee paid to Aperture Investors, LLC (the “Adviser”) is calculated and accrued daily, at an annual rate based on the Fund’s average daily net assets, and consists of a base fee that is adjusted upward or downward depending upon the performance of the Fund’s Institutional Shares relative to the MSCI USD Index. The base fee of 1.82% represents the management fee in the event that the performance of the Fund’s Institutional Shares equals the performance of the MSCI USD Index plus 5.00%. Depending on the performance of the Fund’s Institutional Shares, the Fund’s annual management fee may increase or decrease by a maximum of 1.50% and, accordingly, will range from a minimum of 0.32% (in the event that the performance of the Fund’s Institutional Shares is equal to or lower than the performance of the MSCI USD Index) to a maximum of 3.32% (in the event that the performance of the Fund’s Institutional Shares exceeds the performance of the MSCI USD Index by 10.00% or more). The Management Fee shown is the Management Fee paid to the Adviser during the prior fiscal year, and the total Management Fee payable during the current fiscal year will fluctuate based on the performance of the Fund’s Institutional Shares and thus may be higher or lower than the amount shown.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Institutional Shares	\$60	\$189	\$329	\$738
Class X Shares	\$69	\$218	\$379	\$847

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in total annual Fund operating expenses or in the example, affect the Fund's performance. During its most recent fiscal year, the Fund's portfolio turnover rate was 197% of the average value of its portfolio.

Principal Investment Strategies

Under normal circumstances, the Fund invests at least 80% of its net assets, plus any borrowings for investment purposes, in equity securities. This investment policy may be changed by the Fund upon 60 days' prior written notice to shareholders.

For purposes of the Fund's 80% investment policy, equity securities include common stock, initial public offerings (“IPOs”), private placements, depositary receipts (including American Depositary Receipts (“ADRs”), European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”)), which are certificates typically issued by a bank or trust company that represent ownership interests in securities of non-U.S. companies, derivatives with economic characteristics similar to such securities, and securities of investment companies, including closed-end funds and exchange-traded funds (“ETFs”). The Fund may invest in equity securities of companies of any market capitalization, and may invest in U.S. and non-U.S. (including both developed and emerging market) companies. An “emerging market” country is any country determined by the Adviser to have an emerging market economy, taking into account a number of factors. These factors may include whether the country has a low- to middle-income

economy according to the International Bank for Reconstruction and Development (also known as the World Bank), the country's foreign currency debt rating, its location and neighboring countries, its political and economic stability and the development of its financial and capital markets. These countries may include those located in Latin America and the Caribbean, Asia, Africa, the former Soviet Union, the Middle East and the developing countries of Europe (primarily Central and Eastern Europe).

The Fund may invest in derivatives, including options, futures contracts, swaps and forward foreign currency contracts, to create long or short exposure without investing directly in the underlying assets, increase the return of the Fund and/or hedge (protect) the value of the Fund's assets. As a result of the Fund's use of derivatives, the Fund may also hold significant amounts of U.S. Treasuries.

The Fund seeks to achieve its objective primarily by taking long and short positions in equity securities. When the Fund takes a long position, the Fund purchases a security outright and will benefit from an increase in the price of the security. Similarly, when the Fund takes a long position through a derivative instrument, it will benefit from an increase in the price of the underlying instrument. When the Fund takes a short position, the Fund borrows the security from a third party and sells it at the then current market price. The Fund is then obligated to buy the security on a later date so that it can return the security to the lender. When the Fund takes a short position, it will benefit from a decrease in the price of the security and will incur a loss if the price of the security increases between the time it is sold and when the Fund replaces the borrowed security. Similarly, when the Fund takes a short position through a derivative instrument, it will benefit from a decrease in the price of the underlying instrument and will incur a loss if the price of the underlying instrument increases. The Fund may reinvest the proceeds of its short sales by taking additional long positions, thus allowing the Fund to maintain long positions in excess of 100% of its net assets.

In selecting investments for the Fund and in the pursuit of outperformance, original, primary research shapes the Adviser's perspective on key conditions that make stocks attractive longs (or shorts). The entire process is grounded in the philosophy of life cycle investing and the belief that stock prices are driven by a cycle of investor behavior. Specifically, the Adviser endeavors to identify companies whose stock price reflects under-appreciation or misunderstanding of four key metrics: 1) the addressable market (i.e., the revenue opportunity that exists within a market for a product or service), 2)

operating margins, 3) underlying business economics and 4) corporate management. In order to research and arrive at a differentiated viewpoint on these key metrics, the Adviser undertakes what it believes to be an in-depth diligence process that involves extensive reading of company and industry-related materials as well as in-person meetings with management teams, all supplemented by the running of proprietary data-driven screens designed to give it an advantage in security selection.

While the Fund's primary goal is to generate excess returns, the Adviser seeks to assess the financial risks and opportunities presented by certain environmental, social and governance ("ESG") factors in accordance with the Adviser's Responsible Investment and ESG Policy (the "ESG Policy"). In managing the Fund, the Adviser may consider one or more ESG factors alongside other, non-ESG factors in its investment decisions, but such ESG factors are generally no more significant than other factors in the investment selection process, such that (except with respect to the exclusionary screens described elsewhere) ESG factors may not be determinative in deciding to include or exclude any particular investment in the Fund's portfolio. Even when ESG factors are considered, investments presenting significant ESG-related risks may be purchased and retained by the Fund because considerable discretion is given to the investment team in weighing ESG factors along with other factors in making investment decisions. In addition, the Fund employs an exclusionary screen that prohibits investment in certain types of investments, specifically producers of certain types of weapons and munitions (e.g. landmines). If reliable ESG information regarding a particular investment is not readily available to the Adviser from its regular sources and in certain other situations (including, but not limited to, with respect to (a) investments of a de minimis size when compared to the total size of the Fund's portfolio and (b) investments intended to be held only for a short period of time), the Adviser may not consider ESG factors when making portfolio decisions with respect to such investment.

The Fund is classified as "non-diversified," which means that it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

Due to its investment strategy, the Fund may buy and sell securities frequently.

Principal Risks

As with all mutual funds, there is no guarantee that the Fund will achieve its investment objective. You could lose money by investing in the Fund. **A Fund share is not a bank deposit and it is not insured or guaranteed by the FDIC or any government agency.** The principal risk factors affecting shareholders' investments in the Fund are set forth below.

Market Risk – The prices of and the income generated by the Fund's securities may decline in response to, among other things, investor sentiment, general economic and market conditions, regional or global instability, and currency and interest rate fluctuations. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy, as well as the economies of individual countries, the financial performance of individual companies and sectors, and the markets in general in significant and unforeseen ways. Any such impact could adversely affect the prices and liquidity of the securities and other instruments in which the Fund invests, which in turn could negatively impact the Fund's performance and cause losses on your investment in the Fund. Market risk may affect a single issuer, an industry, a sector or the equity or bond market as a whole.

Equity Market Risk – The risk that the market value of a security may move up and down, sometimes rapidly and unpredictably.

Active Management Risk – The Fund is subject to the risk that the Adviser's judgments about the attractiveness, value, or potential appreciation of the Fund's investments may prove to be incorrect. If the investments selected and strategies employed by the Fund fail to produce the intended results, the Fund could underperform in comparison to other funds with similar objectives and investment strategies.

Emerging Markets/Foreign Investment Risk – The risk that non-U.S. securities may be subject to additional risks due to, among other things, political, social and economic developments abroad, currency movements and different legal, regulatory and tax environments. These additional risks may be heightened with respect to emerging market countries because political turmoil and rapid changes in economic conditions are more likely to occur in these countries. In addition, periodic U.S. Government restrictions on investments in issuers from certain foreign countries may require the Fund to sell such investments at inopportune times, which could result in losses to the Fund.

Derivatives Risk – The Fund’s use of futures contracts, forward contracts, options and swaps is subject to market risk, leverage risk, correlation risk and liquidity risk. Leverage risk, liquidity risk and market risk are described elsewhere in this section. Many over-the-counter (“OTC”) derivative instruments will not have liquidity beyond the counterparty to the instrument. Correlation risk is the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. The Fund’s use of forward contracts and swap agreements is also subject to credit risk and valuation risk. Valuation risk is the risk that the derivative may be difficult to value and/or may be valued incorrectly. Credit risk is the risk that the issuer of a security or the counterparty to a contract will default or otherwise become unable to honor a financial obligation. Each of these risks could cause the Fund to lose more than the principal amount invested in a derivative instrument. Some derivatives have the potential for unlimited loss, regardless of the size of the Fund’s initial investment. The other parties to certain derivative contracts present the same types of credit risk as issuers of fixed income securities. The Fund’s use of derivatives may also increase the amount of taxes payable by shareholders. Both U.S. and non-U.S. regulators have adopted and implemented regulations governing derivatives markets, the ultimate impact of which remains unclear.

U.S. Government Securities Risk – Although U.S. Government securities are considered to be among the safest investments, they are not guaranteed against price movements due to changing interest rates. Obligations issued by some U.S. Government agencies are backed by the U.S. Treasury, whereas others are backed solely by the ability of the agency to borrow from the U.S. Treasury or by the agency’s own resources.

Short Sales Risk – A short sale involves the sale of a security that the Fund does not own in the expectation of purchasing the same security (or a security exchangeable therefore) at a later date at a lower price. Short sales expose the Fund to the risk that it will be required to buy the security sold short (also known as “covering” the short position) at a time when the security has appreciated in value, thus resulting in a loss to the Fund. Investment in short sales may also cause the Fund to incur expenses related to borrowing securities. Reinvesting proceeds received from short selling may create leverage, which can amplify the effects of market volatility on the Fund’s share price. The Fund may also take a short position in a derivative instrument, which involves the risk of a theoretically unlimited increase in the value of the underlying instrument and a potentially unlimited loss.

Small and Medium Capitalization Risk – The risk that small and medium capitalization companies in which the Fund may invest may be more vulnerable to adverse business or economic events than larger, more established companies. In particular, small and medium capitalization companies may have limited product lines, markets and financial resources and may depend upon a relatively small management group. Therefore, small capitalization and medium capitalization stocks may be more volatile than those of larger companies. Small capitalization and medium capitalization stocks may be traded OTC. OTC stocks may trade less frequently and in smaller volume than exchange listed stocks and may have more price volatility than that of exchange-listed stocks.

Non-Diversified Risk – The Fund is non-diversified, which means that it may invest in the securities of relatively few issuers. As a result, the Fund may be more susceptible to a single adverse economic or political occurrence affecting one or more of these issuers and may experience increased volatility due to its investments in those securities. However, the Fund intends to satisfy the diversification requirements for classification as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended.

Liquidity Risk – The risk that certain securities may be difficult or impossible to sell at the time and price that the Fund would like. The Fund may have to lower the price of the security, sell other securities instead or forego an investment opportunity, any of which could have a negative effect on Fund management or performance. Liquidity risk may be heightened in the emerging market countries in which the Fund invests, as a result of their markets being less developed.

Depository Receipts Risk – Depository receipts, such as ADRs, are certificates evidencing ownership of shares of a foreign issuer that are issued by depository banks and generally trade on an established market. Depository receipts are subject to many of the risks associated with investing directly in foreign securities, including, among other things, political, social and economic developments abroad, currency movements and different legal, regulatory and tax environments.

IPO Risk – The market value of shares issued in an IPO may fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about a company's business model, quality of management, earnings growth potential, and other criteria used to evaluate its investment prospects. Accordingly, investments in IPO shares involve greater risks than investments in shares of companies that have traded publicly on an exchange for extended periods of time.

Investments in IPO shares may also involve high transaction costs, and are subject to market risk and liquidity risk, which are described elsewhere in this section.

Private Placements Risk – Investments in privately placed securities may be less liquid than in publicly traded securities. Although these securities may be resold in privately negotiated transactions, the prices realized from these sales could be less than those originally paid by the Fund or less than what may be considered the fair value of such securities. Furthermore, companies whose securities are not publicly traded may not be subject to the disclosure and other investor protection requirements that might be applicable if their securities were publicly traded.

Currency Risk – As a result of the Fund's investments in securities or other investments denominated in, and/or receiving revenues in, foreign currencies, the Fund will be subject to currency risk. Currency risk is the risk that foreign currencies will decline in value relative to the U.S. dollar or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency hedged. In either event, the dollar value of an investment in the Fund would be adversely affected. Currency exchange rates may fluctuate in response to, among other things, changes in interest rates, intervention (or failure to intervene) by U.S. or foreign governments, central banks or supranational entities, or by the imposition of currency controls or other political developments in the United States or abroad.

Leverage Risk – The Fund's use of derivatives and short sales may result in the Fund's total investment exposure substantially exceeding the value of its portfolio securities and the Fund's investment returns depending substantially on the performance of securities that the Fund may not directly own. The use of leverage can amplify the effects of market volatility on the Fund's share price and may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The Fund's use of leverage may result in a heightened risk of investment loss.

LIBOR Replacement Risk – The U.K. Financial Conduct Authority stopped compelling or inducing banks to submit certain London Inter-Bank Offered Rate ("LIBOR") rates and expects to do so for the remaining LIBOR rates immediately after June 30, 2023. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate ("SOFR"), which is

intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new rates. Questions around liquidity impacted by these rates, and how to appropriately adjust these rates at the time of transition, remain a concern for the Fund. Accordingly, it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted.

Large Purchase and Redemption Risk – Large purchases or redemptions of the Fund's shares may force the Fund to purchase or sell securities at times when it would not otherwise do so, and may cause the Fund's portfolio turnover rate and transaction costs to rise, which may negatively affect the Fund's performance and have adverse tax consequences for Fund shareholders.

Investments in Investment Company Risk – When the Fund invests in an investment company, including closed-end funds and ETFs, in addition to directly bearing the expenses associated with its own operations, it will bear a pro rata portion of the investment company's expenses and fees. Further, while the risks of owning shares of an investment company generally reflect the risks of owning the underlying investments of the investment company, the Fund may be subject to additional or different risks than if the Fund had invested directly in the underlying investments. For example, the lack of liquidity in an ETF could result in its share price being more volatile than that of the underlying portfolio securities. Certain closed-end investment companies issue a fixed number of shares that trade on a stock exchange at a premium or a discount to their net asset value. As a result, a closed-end fund's share price fluctuates based on what another investor is willing to pay rather than on the market value of the securities in the fund.

Portfolio Turnover Risk – Due to its investment strategy, the Fund may buy and sell securities frequently. This may result in higher transaction costs and additional capital gains tax liabilities, which may affect the Fund's performance.

Environmental, Social and Governance Risk – The Adviser may consider certain ESG factors as part of its decision to buy and sell securities. Applying ESG factors to the investment analysis may impact the investment decision for securities of certain issuers and therefore the Fund may forgo some investment opportunities that might be available to funds that do not consider ESG factors. Securities of companies with ESG practices may shift into and out of favor depending on market and economic conditions, and the Fund's performance may at times be

better or worse than the performance of funds that do not use ESG factors. An increased focus on ESG or sustainability investing in recent years may have led to increased valuations of certain issuers with higher ESG profiles. A reversal of that trend could result in losses with respect to investments in such issuers. In addition, ESG factors will not necessarily be identified or evaluated for every investment.

Geographic Focus Risk – To the extent that it focuses its investments in a particular country or geographic region, the Fund may be more susceptible to economic, political, regulatory or other events or conditions affecting issuers and countries within that country or geographic region. As a result, the Fund may be subject to greater price volatility and risk of loss than a fund holding more geographically diverse investments.

Performance Information

The bar chart and the performance table below illustrate the risks and volatility of an investment in the Fund by showing changes in the Fund's Institutional Shares' performance from year to year and by showing how the Fund's average annual total returns for 1 year and since inception compare with those of a broad measure of market performance. Of course, the Fund's past performance (before and after taxes) does not necessarily indicate how the Fund will perform in the future.

Updated performance information is available on the Fund's website at www.apertureinvestors.com or by calling toll-free to 1-888-514-7557.

BEST QUARTER	WORST QUARTER
20.51%	(16.77)%
12/31/2020	3/31/2020

The performance information shown above is based on a calendar year. The Fund's Institutional Shares' performance from 01/01/2023 to 03/31/2023 was 5.66%.

Average Annual Total Returns for Periods Ended December 31, 2022

This table compares the Fund's average annual total returns for the periods ended December 31, 2022 to those of an appropriate broad-based index.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts ("IRAs"). After tax returns are shown for Institutional Shares only. After tax returns for Class X Shares will vary.

Returns after taxes on distributions and sale of Fund shares may be higher than before-tax returns when a net capital loss occurs upon the redemption of Fund shares.

Aperture Endeavour Equity Fund	1 Year	Since Inception (09/30/2019)
Fund Returns Before Taxes		
Institutional Shares	(16.33)%	8.51%
Class X Shares	(16.42)%	8.34%

Fund Returns After Taxes on Distributions and Sale of Fund Shares		
Institutional Shares	(9.64)%	6.20%
MSCI ACWI hedged to USD Net Total Return Index (reflects no deductions for fees, expenses or taxes)		
	(15.48)%	7.72%

Investment Adviser

Aperture Investors, LLC

Portfolio Manager

Thomas Tully, Portfolio Manager, has managed the Fund since its inception in 2019.

Purchase and Sale of Fund Shares

You may generally purchase or redeem shares on any day that the New York Stock Exchange (“NYSE”) is open for business.

To purchase shares of the Fund for the first time, you must invest at least \$500. There is no minimum for subsequent investments. The Fund may accept investments of smaller amounts in its sole discretion.

If you own your shares directly, you may redeem your shares by contacting the Fund directly by mail at: Aperture Funds, P.O. Box 219009, Kansas City, MO 64121-9009 (Express Mail Address: Aperture Funds, c/o SS&C Global Investor & Distribution Solutions, Inc., 430 West 7th Street, Kansas City, MO 64105) or telephone at 1-888-514-7557.

If you own your shares through an account with a broker or other financial intermediary, contact that broker or financial intermediary to redeem your shares. Your broker or financial intermediary may charge a fee for its services in addition to the fees charged by the Fund.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income, qualified dividend income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account (“IRA”), in which case your distribution will be taxed when withdrawn from the tax-deferred account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
